

J.J. McDONNELL

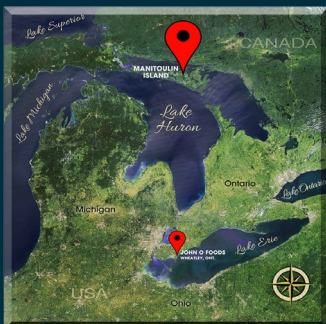

Excellence in Seafood

Steelhead Trout *Oncorhynchus mykiss*

Sustainably raised in the cold, clean Canadian waters of Northern Lake Huron. Natural conditions are simulated as closely as possible, with low fish densities, open water containment pens allowing fresh water flow, and excellent water exchange.

Entailing many years of development, environmental stewardship and sustainability, combined with demanding organic production standards have created an incredible tasting fish that ranks amongst the finest farmed and wild species in the seafood industry.

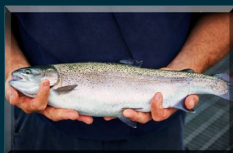

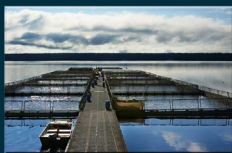

Steelhead Trout

Steelhead Trout

With a firm flesh and natural bright ruby red color, steelhead offers consistent supply, and cooking versatility. Its delicate taste and texture make it a popular choice for sushi, or it can be baked, grilled, or smoked.

These are the only certified organic steelhead trout being grown in North America
